Allowing corporations to utilize a self-serving business model to maipulate information transfer in the public domain is dangerous to the common good and an antithesis to the evolution of an open advanced society.

Communication corporations should not be allowed to invoke their own construct of cost - value to the transmission of information. Instead the government of the People should demand that the corporations EXPAND technological data transfer in opposition to controlling their system design.

Building a system to fully handle data and demand - as opposed to manipulating content for profiteering and "mind control" by information access i- s the RIGHT THING TO DO.

Failure to recognize nefarious control and manipulation of this -in reality - public SEVICE sector of society; will result in a system that harms the Public Good and rewards the dark side of human endeavors.

PROTECT THE FREE FLOW OF INFORMATION - DO THE RIGHT THING.
